

Projet SQL - B2 - 2022/2023

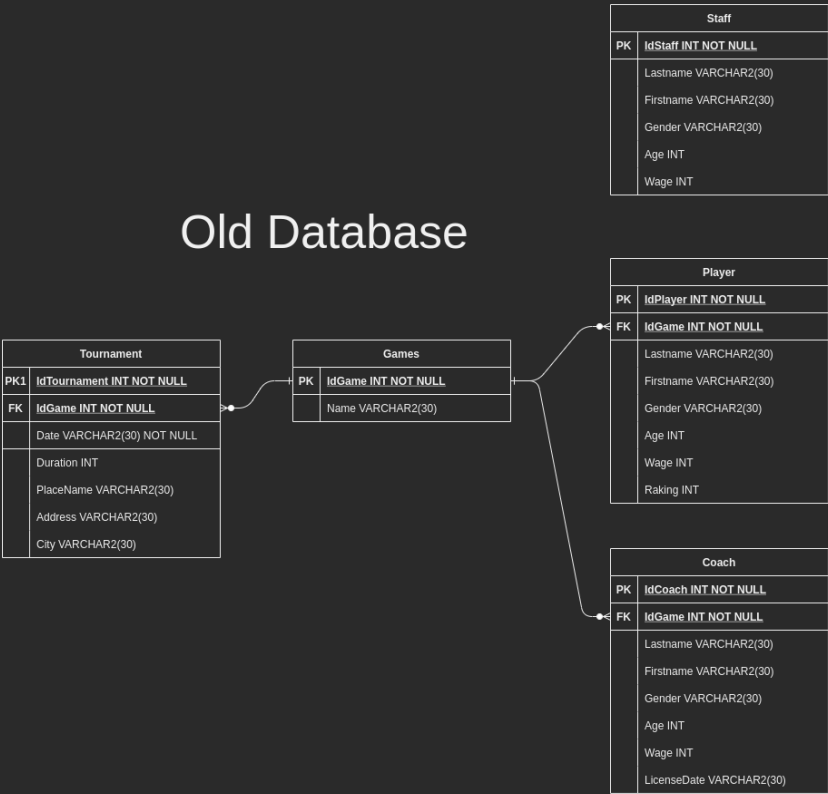

You've been contacted by TeamLikwid to migrate their old database to their new schema. They want you to:

- Create a .sql script that'll create the new database schema
- Create a second script that'll transfer data from the old DB to the new one

In addition, to make sure they still can access their data, they want you to show the queries + results for the followings:

- List every tournament for a given game name
- Given a game name, retrieve the average wage of the players
- List all tournament by place
- Get the number of players by gender

Old Database

New Database
